Four graphite + PPMA electrodes in one tough sensor — High performance with industrial strength

The ProCon® C554 series quadruple electrode conductivity sensor has been proven to operate seamlessly in industrial applications up to 500,000µS/cm.

Industrial environments can be harsh, featuring corrosive substances and fluctuating temperatures. The ProCon® C554 series conductivity sensor transmitter is built with durability in mind. Constructed from rugged materials such as graphite, PPMA, corrosion-resistant plastics and double shielded cable, this robust build ensures longevity and reliability. Pair it with a ProCon® conductivity controller (featuring SimplCal®) for a truly seamless experience.

The ProCon® line of analytical sensor transmitters have been designed for difficult industrial applications and to outperform even in extreme conditions.

The 2-wire 4-20mA, 4-wire or 4-20mA + RS485 output options simplify calibration and communication with remote displays and controllers.

Always ask for **ProCon® C554** by name to be sure you are getting a genuine **Icon Process Controls** product.

Specifications

Power Supply	9 – 36VDC
Sensor Electrode Material	Graphite + PPMA
Housing Material	PP
IP Rating	IP68
Measurement Range	0 – 500,000µS
Accuracy	±1% of Reading
Pressure Resistance	100 Psi
Temperature Compensation	PT1000 (Std)
Temperature Range	14 – 176°F | -10 – 80°C
Calibration	Factory Calibrated
Connection Methods	· 4-20mA 2 wire · 4-wire (direct to ProCon® controller) · 4-20mA + RS485
Cable Length (w/o J-Box)	M12: 5m cable can be extended to 100m
Installation Thread	NPT ¾"

Cable Options

The ProCon® series offer complete flexibility of cabling options throughout the range. All cables are shielded against spurious EMI and are potted inside the sensor ensuring environmental protection.

The standard cable length for most sensors is 5m (15 ft). However, cables can be supplied as any continuous size up to 100m.

In-line Mounting

1. If air is present, avoid vertical installation (okay if pipe is full).

2. Optimum installation 15° above horizontal.

3. Process liquid should flow upward. (for downward flow ensure backpressure is present in order to avoid air within pipe)
