

ProCon® — P14G with NEXUS® pH Sensor Transmitter

The P14G Series pH sensors have a 4-20mA + RS485 direct outputs, thus eliminating the need for costly preamps or smart sensor interfaces.

- ✓ Double junction reference extends sensor life and protects against poisoning ions
- ✓ Durable crack resistant glass enhances performance and increased reliability
- ✓ Maximum chemical resistance provided by a rugged PP or PPS body materials
- ✓ Operates in sub-zero temperatures down to 14°F (-10°C).
- ✓ Advanced electronic diagnostics
- ✓ Superior glass electrode technology result in an industrial sensor with unequalled durability and reliability

- ✓ 4-20mA Output
- ✓ Temperature Compensated
- ✓ Double Salt Bridge
- ✓ No Preamp Required
- ✓ High Accuracy
- ✓ Quick Response Time
- ✓ 3/4" NPT Connection
- ✓ PP or PPS Body Materials
- ✓ RS 485 Modbus Communication

Engineered for accuracy, ruggedness and longevity in general process applications

The robust sensor design of the versatile ProCon® P14G confidently offers long-term reliability with fast response times and high accuracy in a wide range of general process applications.

These sensor transmitters are have been specifically engineered with a double ceramic reference diaphragms that provide highly responsive pH indication.

The double salt bridge junction coupled with the PTFE reference technology is the foundation for all P14G series electrodes. The inner reference chamber is charged with potassium chloride (KCl) gel.

All measurement functions are combined in one compact body — measuring electrode, temperature sensor and an inner reference chamber.

The 2-wire 4-20mA, 4-wire or 4-20mA + RS485 output options simplify calibration and communication with remote displays and controllers.

Smart Sensor Technology

Advanced electronic circuitry stores pH data for automatic sensor recognition and trouble-free calibration when connected to the ProCon® Controller.

Outputs

1. 4-20mA 2-Wire
2. 4-20mA + RS485

Both the measuring and reference electrodes are encapsulated within the non-porous advanced KCl infused polymer known as Nexus®.

Less Calibration and Maintenance

Most sensors require on-going recalibration and are prone to premature failure due to what is known as gradient drift, or sensor drift.

The Nexus® series is a solid reference material. Poisoning or leaching of the reference electrolyte that occurs in standard sensor is greatly reduced.

The Nexus reference helps to eliminate the need for ongoing maintenance or cleaning requirement due to fouling or film build up removal which occurs with many process applications with traditional pH sensors.

Faster Response — Longer Lasting

The solid Nexus® reference provides for faster response time to changing pH values since there is no requirement for a junction.

- ✓ No Costly Preamps Required
- ✓ Direct 4-20mA & RS485 Outputs

Enhanced chip technology allows for remote calibration as well as diagnostic data

Data analysis and direct 4-20mA signal or RS485 Digital outputs

Integral Preamp

2-wire 4-20mA + RS485 Modbus direct sensor to controller connection eliminates the requirement for a preamp.

Digital output removes the need for high impedance cable — longer distances without compromising accuracy.

Nexus® technology

- Solid KCl infused reference junction
- Eliminates reference poisoning/leaching
- Extended life expectancy

Temperature Control

Temperature vs. Pressure

In-line Mounting

1. Avoid vertical installation. (air may be present)
2. Optimum installation 15° above horizontal.
3. Process liquid should flow upward. (for downward flow ensure backpressure is present in order to avoid air within pipe)

Typical Application

Cable Options

The ProCon® series offer complete flexibility of cabling options throughout the range. All cables are shielded against spurious EMF and are potted inside the sensor ensuring environmental protection.

The standard cable length for most sensors is 5m (15 ft). However, cables can be supplied as any continuous size up to 20m (66 ft).

Standard accessories include submersion couplers, typically used with extension cables for direct connection to the ProCon® Controllers.

Extension cables also permit distances between sensor and instrument of up to 30 m (100 ft.) without external preamplifier.

Temperature compensation

The temperature compensator enables sensor to adjust for temperature effects on the glass pH electrode output.

The sensor can also use this measurement to compensate for solution pH temperature effects.

Sensors can be ordered with integral temperature sensors. The integral temperature compensator is available in two outputs — Pt 1000 (std) and Pt 100.
